

Counting Frequency of Alphabet

You are given a string S which consist of maximum 5 unique alphabets. Count the frequency of each alphabet.

Input Format

A single string S with lowercase alphabet only.

Output Format

Output each unique alphabet along with the frequency.

Constraints

- $1 \leq |S| \leq 1000$.
- Implement your algorithm in C using Hash Table concept in array.
- Maximum unique alphabets is 5. Hash Table size is also 5. Use ASCII to get the hash key.
- Use linear probing if collision happens.

Sample Input 1 (standard input)

```
uiiauiuuiaui
```

Sample Output 1 (standard output)

```
i 6  
u 5  
a 2
```

Sample Input 2 (standard input)

```
skibidiskibidiskibidi
```

Sample Output 2 (standard output)

```
s 3  
i 9  
k 3  
b 3  
d 3
```
